

NEW CRANE SYSTEM FOR NUMBER 2 BLEACH PLANT

-
- Client:** Norske-Skog Canada (Fletcher Challenge)
Elk Falls, Campbell River, BC
- Value:** \$1,250,000
- Description:** Norske-Skog's No. 2 Bleach Plant required the installation of a new hoisting system to remove existing bleach plant washer drums. Proposals from other consultants varied in cost and scope from \$4,000,000 to \$6,000,000. In addition to providing the mill with hoisting versatility meeting all original project operational requirements, limited headroom and 30 tonne lifting capacity, Sacré-Davey Engineering developed an innovative hoisting scheme which reduced current shut down requirements from 8 days to 3 days.
- Scope:** SDE provided Complete EPCM services for this project, with the exception of the project's construction supervision, which was performed by Norske-Skog.
